NEWS RELEASE

New CSA-Certified 220V Heat Pads Now Available

Stanfield® Heat Pads are now available for use in Canada with 220-volt power, according to Claudio Faundez, Product Manager at Osborne Industries, Inc. Faundez reports that new specially-designed models for the Canadian market have recently received Canadian Standards Association (CSA) certification.

“The CSA action was completed in time for the company to respond to the rising demand for higher voltage products in Canada and for the new products to reach the market before winter weather arrives”, says Faundez. “Many producers in Canada prefer a permanent connection that is sealed against moisture and corrosion. In view of this preference, these new models of Stanfield Heat Pads are approved with a ready-to-wire connection at the end of their 10-ft (3-m) power supply cord rather than the standard plug end.”

This year marks 30 years since Stanfield Heat Pads were first introduced to the market for electric heat pads for pigs and other small animals, notes Faundez. He points out that Osborne has delivered safe, reliable, and economical heat pads for pigs and other small animals throughout all these years because of its strong emphasis on quality. Osborne maintains an ISO 9001 certified quality management system.

Faundez says the company is always looking for ways to equip livestock producers worldwide with better heating products that meet their special requirements. All Stanfield Heat Pads are also certified to European standards and bear the CE mark.

Stanfield Heat Pads are supplied in a wide variety of sizes and shapes for farrowing and nursery applications and are available worldwide from many leading equipment distributors. The manufacturer, Osborne Industries, Inc., Osborne, KS, USA, is a diversified manufacturer and distributor of livestock management equipment.
